

Prover Infrastructure Updates

- Update
 - Benchmark mainnet / EEST blocks with OpenVM v2.1.0-preview ([result](#))
 - Reproduce similar number on Ethproofs (2.4s mean proving time for same 1000 blocks)
 - Integrate [zkevm-benchmark-workload](#) metrics into [evm-gasfit](#) ([#14](#))
 - Implement [provoor](#) as a target client for [benchmarkoor](#)
- Next
 - Improve provoer and do benchmark for all guests
 - Integrate cost estimator into Ere and create dashboard for guests performance tracking and proving time correlation analysis

Provoor usage

- provoor up/down to deploy/destroy the distributed provers ([config example](#))
- benchmarkoor run with provoor as target client to do benchmark as usual ([config example](#))
- Benchmark results can be published to gh-pages ([example](#))
- Support OpenVM and ZisK

Test #2105

benchmark/compute/instruction/test_storage.py::test_storage_access_cold_benchmark[fork_Amsterdam-blockchain_test-SSTORE_same-benchmark-gas-value_10...

EEST Info

Description Benchmark cold storage slot accesses using code generator. Each iteration accesses a different storage slot (incrementing key) to ensure cold access costs are measured.

Comment `execution-specs` generated test

Fixture Format blockchain_test
