

# Prover Infrastructure Updates

- Update
  - EF cluster scalability check ([note](#))
  - Run mainnet / EEST 60M blocks benchmark ([viewer](#))
  - Release zkboost@v0.9.0 ([release](#))
    - Proof request and verification API updated (includes ChainConfig as part of public values)
    - ProofType enum updated
- Next
  - Integrate EF cluster benchmark result into evm-gasfit
  - Investigate crashed blocks
  - Update CL and ethereum-pacakges to adapt to zkboost@v0.9.0 API

# EF cluster scalability check

- Benchmark 500 mainnet blocks with ZisK v0.18.0
- CPU bounded when going from 2 to 4 GPUs
- Scales well when going from 1 to 4 machines
- More details in this [note](#)

|          | 1GPU        | 2GPUs         | 4GPUs         | 2x 4GPUs      | 4x 4GPUs       |
|----------|-------------|---------------|---------------|---------------|----------------|
| Scalable | 1x (100.0%) | 1.98x (99.1%) | 3.35x (83.7%) | 6.79x (84.8%) | 12.11x (75.7%) |
| Total    | 1x (100.0%) | 1.95x (97.7%) | 3.23x (80.8%) | 6.20x (77.5%) | 10.22x (63.9%) |

Speedup (Efficiency)
